Apple Color Printer: No Support under Windows (7/94)

=====

Article Created: 5 July 1994

TOPIC -----

Does the Apple Color Printer work under Microsoft Windows?

DISCUSSION-----

Apple does not provide any support for using the Apple Color Printer in the Windows environment, however the printer is identical to the Canon BJC-800 color printer with the SCSI option installed. Canon provides software support for the Macintosh and Microsoft Windows, so the drivers from Canon could theoretically be used.
