TokenTalk NB Card and Power Macintosh Compatibility (3/95)

=====

Article Created: 19 August 1994  
Article Reviewed/Updated: 23 March 1995

TOPIC -----

Is the TokenTalk NB Card (661-0460) compatible with Power Macintosh computers?  
We have two Power Macintosh 8100/80, and one Power Macintosh 8100/80 AV  
computers. Also will the TokenTalk NB Card work the Power Macintosh 8100/110  
computers?

The AV Power Macintosh will boot with the card installed, but there is no  
network for testing to see if the card works. The other two Power Macintosh  
computers will not even boot (no chime, no video, no HD access, but the fan is  
running).

DISCUSSION -----

The old TokenTalk NB Card (661-0460) has not been tested with any of the Power  
Macintosh systems and is not compatible.

The Token Ring 4/16 NB Card and Token Ring NB/c Card are compatible with the  
Power Macintosh 7100/66 and /80, Power Macintosh 8100/80 and /110, Workgroup  
Server 8150, and Workgroup Server 9150 systems. The Token Ring NB/c Card is  
compatible with the Power Macintosh 6100/60 and /66, and Workgroup Server 6150  
when using the NuBus Adapter Card. The System 7.1.2 installer has TokenTalk  
software for the Token Ring 4/16 NB Card but not for the Token Ring NB/c Card.  
NSI 1.4.5 or later is included in the box with the Token Ring NB/c Card. For the  
Token Ring 4/16 NB Card, we highly recommend that NSI 1.4.5 or later be used to  
install the latest Token Ring software.

If you plan on using MacTCP, you need to use MacTCP 2.0.4 or later.  
Operationally, there is no difference between the 680x0 and these Power  
Macintosh systems in regards to Apple's Token Ring cards.

Article Change History:

23 Mar 1995 - Updated for higher speed Power Macintosh computers.
