A/UX: Support for bootp and rarpd (8/94)

===

Article Created: 29 August 1994

TOPIC ---

Does A/UX 3.0 support bootp and/or rarpd?

DISCUSSION --

Neither the desktop version of A/UX 3.0.1 nor the AWS 95 A/UX 3.1
supports bootp or rarpd.

Note that development on the desktop version of A/UX 3.0.1 has been
discontinued. The latest version of A/UX 3.1 was developed for the Apple
Workgroup Server 95, hence it does not support non-AWS 95 CPUs.

The future AIX/PowerOpen product MAY support bootp and rarp protocols, but this
has not been finalized.

Several other Apple products may use bootpd and rarpd for auto configuation and
management, including:

```
MacTCP    rarpd,bootp for assigning addresses
LW 810    rarpd for assigning addresses; bootp for loading software
          (not implemented yet)
```

People who wish to use bootp and rarpd to manage the above mentioned Apple
products will need to configure the rarpd or bootp programs on another Unix
machine.
