AppleShare: Platforms & Mac OS Releases Supported (11/96)

Article Created: 31 August 1994
Article Reviewed/Updated: 18 November 1996

TOPIC -----

This article details the supported platforms (see the following Note) and Mac OS releases for the AppleShare product line.

NOTE: Supported means users can expect technical assistance from Apple and all issues will be prioritized along with all other development efforts.

DISCUSSION -----

Begin_Table

Supported Platforms

AppleShare 3.0.1	- all 68030-based and below systems
AppleShare 4.0.1/4.0.2	- all 68040-based systems, except 660AV and 840AV*
AppleShare 4.0.2	- PowerPC-based systems with clock speeds less than or equal to 80mhz (except 6100/66 and 7100/80)
AppleShare 4.1	- all NuBus PowerPC-based systems available through 4/95 (not the 7200, 7500, 8500, or 9500 systems)
AppleShare 4.2	- all NuBus PowerPC-based systems (not the 7200, 7500, 8500, or 9500 systems)
AppleShare 4.2.1	- runs on PCI-based Workgroup Servers and NuBus-based Workgroup Servers and Power Macintosh computers. AppleShare 4.2.1 is compatible with Open Transport on PCI-based Power Macintosh computers 7200, 7500, 8500, and 9500. Apple has not certified AppleShare 4.2.1 and Open Transport on NuBus-based Power Macintosh computers. AppleShare 4.2.1 will NOT run on any 680x0-based Macintosh systems.

NOTE: No version of AppleShare is supported on computers which use the 603- or

603e-based PowerPC processor. Also, AppleShare 4.0.2 for Power Macintosh is no longer sold separately.

Supported Mac OS Releases

AppleShare 3.0.1 - System 7.0 or greater
AppleShare 4.0.1/4.0.2 - System 7.0.1 (With System 7 Tune-Up 1.1.1) or greater
AppleShare 4.1 - System 7.1.2 or greater
AppleShare 4.2 - System 7.5.1 or greater
AppleShare 4.2.1 - System 7.5.3

AppleShare Workstation 3.5 - System 7.0 or greater
AppleShare Workstation 3.6 - System 7.5.1 or greater
AppleShare Workstation 3.6.1 - System 7.5.1 or greater
AppleShare Workstation 3.6.2 - System 7.5.1 or greater

End_Table

NOTE: From a functionality standpoint, AppleShare 4.0.1 is identical to the product AppleShare 4.0.2 for 68040-based Macintosh Computers. There is no need to upgrade AppleShare 4.0.1 to AppleShare 4.0.2. The only differences between these versions are the version number itself, and that AppleShare 4.0.2 is available in a complete retail package, while AppleShare 4.0.1 is available as a tune-up only requiring installation over an existing copy of AppleShare 4.0.

If you have Workgroup Server 95, do not upgrade to system software version 7.5 or later. A Workgroup Server 95 running A/UX works only with system software version 7.0.1 and Tune-Up 1.1.1.
