Workgroup Server 95: Recreating MacPartition (10/94)

=====

Article Created: 06 October 1994

TOPIC -----

When a user is doing custom partitioning on a Workgroup Server 95 startup drive and they delete the MacPartition, they can encounter a problem.

DISCUSSION -----

It seems that HDSC Setup on the A/UX installers gets confused when there is a Mac Partition that is deleted. HDSC Setup doesn't give you the option of creating a replacement MacPartition until you remove and recreate the Apple disk driver at the top of the disk map.
