System 7.5: DOS Mounter Compatibility (2/95)

===

Article Created: 10 October 1994
Article Reviewed/Updated: 14 February 1995

TOPIC ---

In the documentation we recommend against using Dayna Communications' DOS
Mounter with System 7.5. However, my customer has site licensed DOS Mounter.

Is this recommendation against using it for technical reasons or because we ship
7.5 with Macintosh PC Exchange?

DISCUSSION --

After checking all bug reports and checking with Dayna Communications, I have
not been able to discover a reason why you would not be able to use DOS Mounter
with System 7.5.

Please be advised, though, that Macintosh PC Exchange has been tested by Apple,
and is KNOWN to work, whereas with DOS Mounter, we just have not seen any
problems or problem reports. Since Macintosh PC Exchange is shipped with System
7.5, it remains the recommended solution.
