Installer MAE 4.0: Brief Description (10/94)

======================================================================

Article Created: 11 October 1994

TOPIC -----------------------------------------------------------

This article provides a brief description of the Installer MAE 4.0.

DISCUSSION ------------------------------------------------------

Installer MAE 4.0 is a UNIX-savvy installer that comes with MAE. It normally
lives in the appledir/Tools directory. The problem with most installers is they
look at the root filesystem to determine free disk space. However, with UNIX the
root filesystem often does not have very much free space. Installer MAE 4.0 is a
little smarter about determining free space.
