LaserWriter Pro: Cycle the Power After Installing Trays (10/94)

=====

Article Created: 20 October 1994

TOPIC -----

After adding the envelope feeder to a LaserWriter 16/600 PS, I could not get the printer to print to the envelope feeder. Everytime I tried printing, it pulled paper from the multi-purpose tray. I made sure that I had the LaserWriter 8.x software configured for an envelope feeder. How can I print to the envelope feeder?

DISCUSSION -----

In order for the LaserWriter Pro 600/630 or the LaserWriter 16/600 PS printers to print to the envelope feeder, you have to cycle the power on the printer after installing the envelope feeder.

Check the startup test page and verify that it indicates that the envelope feeder is installed. If not, power off the printer, reseal the connection to the feeder, and power it back up. Once the printer recognizes the feeder, you can use the Auto Configure to list the feeder as installed.
