Apple Hard Drives: Termination Requirements (10/94)

Article Created: 28 October 1994

TOPIC -----

Hard drives or DAT drives may need to have the termination resistors removed or made inoperative on certain configurations of multiple drive systems or WorkGroup Servers. Below is a brief description of termination requirements for the different systems or WorkGroup Servers.

DISCUSSION -----

Computer Model -----	Termination Requirement -----
Quadra/Centris 660 AV Quadra/Centris 610 Power Macintosh 6100/60 Workgroup Server 60 Workgroup Server 6150	Hard Drive needs termination
Macintosh IIfx, IIfx Quadra/Centris 650 Power Macintosh 7100/66	Hard Drive needs termination
Quadra 800/840 AV	Last drive in line needs termination. Remove termination from all other drives installed, including DAT.
Power Macintosh 8100/80 Workgroup Server 8150	Has two internal cables: 1) Internal/external cable requires that all drives have no termination. Remove termination from all internal drives (termination is on cable) 2) The internal channel cable (max 1 drive only) requires termination.
Quadra 900	Remove termination from all internal

Quadra 950 drives (termination is on cable).
Workgroup Server 95
Workgroup Server 9150
