Macintosh 630 family: Trouble Setting Date and Time (10/94)

===

Article Created: 28 October 1994

TOPIC ---

I am not able to get the date and time properly set on my Quadra 630. I have
tried it with extensions off and it made no difference.

DISCUSSION --

If you have trouble setting the date and time on a Quadra 630, the red reset
button on the logic board needs to be pressed. This button resets the logic
board.

Because of the possibility of damage to the logic board, this operation needs to
be done by an authorized service provider.
