Adobe Color Central: Upgrade for Workgroup Servers (11/94)

===

Article Created: 21 November 1994

TOPIC ---

I have been experiencing system hangs when running Color Central 2.2 (CC) on my
PowerPC based Workgroup Server. My server is typically running an extensive
array of applications and other processes.

DISCUSSION --

Adobe has recently released version 2.2.1 of CC. Like the previous native
version, 2.2.1 ships as a fat binary. Our testing for this very specific issue,
indicates that this bug fix release is much more robust when running on a
heavily loaded server than 2.2.

Along with Adobe, we recommend that customers experiencing hangs should upgrade
to this new version as soon as possible. CC customers should contact Adobe for
the upgrade.
