AppleShare & GraceLAN: Network Trash Prevents Disconnect (2/95)

Article Created: 26 January 1995
Article Reviewed/Updated: 1 February 1995

TOPIC -----

As the administrator of our AppleShare server, I'm using GraceLAN to limit the time clients can access the server. The users have discovered that if they put something in the trash from the server but not empty it, GraceLAN will not disconnect them. Is there a workaround to this problem?

DISCUSSION -----

Yes, do not give the client users write access to the root level. This will prevent the Network Trash from creating a folder. AppleShare needs write access to the whole volume to create the Network Trash Folder (which is invisible). When the client puts anything in the trash they will get the message: "Filename cannot be left in the trash. Do you want to delete it immediately?"
