Apple WorkGroup Server: Meaning of DAT drive LEDs (2/95)

=====

Article Created: 6 February 1995

TOPIC -----

The Apple WorkGroup Server 8150 and 9150 have a DAT (Digital Audio Tape) Drive which has some drive status lights on the front panel. When I pull a tape out of the drive, the status lights flash the media wear lights (left: steady green, right: pulsing amber). What is going on?

DISCUSSION -----

After every 25 hours of use, the head cleaning light sequence flashes even without a tape until the cleaning cartridge is inserted. The cleaning tape resets the lights.
