Apple IP Gateway: Cannot See Other Clients on Same Server (5/96)

==

Article Created: 7 March 1995
Article Reviewed/Updated: 28 May 1996

TOPIC ---

I have set up two Macintosh systems on Appletalk that use the Apple IP Gateway
to get IP connections to the Internet. Both machines can connect to Internet
services and visa-versa, but the machines cannot talk to each other. For
example, a machine on the Internet can ping these two machines. These two
machines can ping any machine on the Internet. However, neither of these two
machines can ping each other. Why?

DISCUSSION --

This issue was resolved with the IP Gateway 1.0.1 patch. This patch can be
obtained from the following sources.

• Web: www.info.apple.com/Apple Support Area
Apple.Software.Upadates/US/Macintosh/Networking_and_Communications/Other_N-C

• FTP: ftp.info.apple.com/Apple Support Area
Apple.Software.Upadates/US/Macintosh/Networking_and_Communications/Other_N-C

• Applelink: through the path, Support/Developer Support/Developer
Services/Technical Documentation/ABS Technical Notes

• Developer CD: Technical Documentation/ABS Technical Notes (on the reference
library disk)

Article Change History:
07 Apr 1995 - Made minor technical updates.
28 May 1996 - Issue resolved with patch, provided sources.
