MAE 2.0: KeyAccess Is Compatible (3/95)

==

Article Created: 27 March 1995

TOPIC ---

Is KeyAccess compatible with MAE 2.0?

Can I hold the shift key down while launching MAE and get the same result (all
extensions off) as holding the shift key down while restarting a Macintosh
computer?

DISCUSSION ---

Yes, MAE 2.0 is compatible with KeyAccess which lets users access applications
on a KeyServer.

No, holding the shift key down does NOT disable extensions while launching MAE.
An alternative is to use either the -noextensions option on the mae command
line, or the Extensions Manager in MAE 2.0 which turns extensions on or off.
