Apple RAID: Generic Document Icon On Users Workstation (3/95)

===

Article Created: 29 March 1995

TOPIC ---

If I define an Apple RAID volume on a server, and set permissions to See Folder
privileges, when users mount the volume from a client workstation they get a
generic document icon on their desktop instead of the Apple RAID volume icon.
How do I get the regular Apple RAID icon to appear?

DISCUSSION --

Seeing a generic document icon will happen with any AppleShare server volume
with a custom icon. Apple RAID's icon gets created as a custom icon. When you
create a custom icon for a hard drive, the system creates an invisible file on
the drive named "Icon" where the icon is stored. If the user is not allowed to
see this file, they get no custom icon. Enabling a user to See Files permission
will show the custom icon on the client's workstation.
