Workgroup Server 6150/66: Description (3/95)

Article Created: 31 March 1995

TOPIC -----

This article describes the Workgroup Server 6150/66.

DISCUSSION -----

The Workgroup Server 6150/66 is the most affordable member of the PowerPC processor-based Workgroup Server family from Apple. It delivers the file and print, Internet, and applications server performance that small workgroups in business and education demand. And it's ideal for workgroups that use both Macintosh and Windows software-based computers.

Servers are high-performance, highly reliable systems that provide organizations with faster, more efficient shared network services and secure centralized storage. The Workgroup Server 6150/66 not only meets these criteria, it also runs the Mac OS, making all of its capabilities incredibly easy to use.

Featuring a 66-megahertz PowerPC 601 processor with on-chip and level-2 cache, the Workgroup Server 6150/66 delivers outstanding performance. This power is supported by a large-capacity hard disk drive for convenient, comprehensive storage and a quadruple-speed CD-ROM drive. And increased reliability is provided by the inclusion of Apple RAID (Redundant Array of Independent Disks) Software, which supports disk mirroring, so your mission-critical information and applications are always accessible. Apple RAID Software also supports disk striping for improved performance. (Apple RAID mirroring or striping requires at least two disk drives.)

To make sure that you get the most out of all that power and capacity, the Workgroup Server 6150/66 comes bundled with software designed to streamline the tasks for both users and network managers. For users, there's everything from server-based contact management and scheduling software to solutions that allow workgroups to create, share, and review information electronically. For network managers, there's software to help manage application distribution and updates, server usage, and remote AppleShare administration. And the Workgroup Server

..TIL17488-Workgroup_Server_6150-66-Description_3-95.pdf

6150/66 includes AppleShare Client for Windows software, so Windows users on the network can access networked printers and files stored on a Workgroup Server running AppleShare file and print sharing software.

If you're considering a server for your workgroup, or an additional server for your network, look closely at the Workgroup 6150/66. It offers all of the server features small workgroups need at an affordable price.

Features

Expansion and storage

- Slot for processor-direct card or NuBus expansion card (7-inch)
- Internal 700MB hard disk drive
- Internal quadruple-speed CD-ROM drive
- SCSI bus to support up to seven devices (two internal, five external)
- Eight ports support a wide range of peripherals

Networking

- Built-in Ethernet and LocalTalk capabilities
- Support for AppleTalk and TCP/IP networking protocols
- Token Ring support optional (with 7-inch NuBus card)

Power, speed, and memory

- 66-MHz PowerPC 601 RISC microprocessor with floating-point processor and 32K on-chip cache
- 256K level-2 cache
- 16MB of RAM, expandable to 72MB

Features Built Into Every Workgroup Server

Fast, easy setup

- Comes with System 7.5.1 software installed
- Includes AppleShare 4.1 file and print server software (some configurations)

Compatibility

- Comes with AppleShare Client for Windows
- Can be ordered as part of the Apple Internet Server Solution for the World Wide Web

Bundled software

- Includes a variety of server administration and user productivity tools, including Apple RAID Software

Service and support*

- Includes 24-hour telephone support
- Includes within-two-business-day, on-site service response
- Offers optional within-four-hour or next-business-day on-site service response

* These services are available only in certain areas of the U.S.
