System 7.5: Improper Shutdown Message (3/95)

=====

Article Created: 31 March 1995

TOPIC -----

When I see the System 7.5 improper shutdown message dialog box, why does it not include as one of my options "Shutdown via the Special Menu" in the Finder? Is Apple is going to make this menu option command obsolete? Is Apple discouraging the use of Shutdown from the Finder?

DISCUSSION -----

Apple is not discouraging the use of the Shutdown menu item from the Finder's Special menu. We are simply offering system shut down alternatives and allowing the customer to choose the most convenient method to shut down.

At this time, Apple has not made definite plans whether the Shut Down menu item from the Finder's Special menu will be implemented or made obsolete in future System software releases.
