Install Apple Telecom 2.3.3 on Quadra 660AV, 840AV (3/97)

Article Created: 3 April 1995
Article Reviewed/Updated: 13 March 1997

TOPIC -----

This article describes installing Apple Telecom 2.3.3 on a Quadra 660AV, 840AV, or Centris 660AV.

DISCUSSION -----

The Quadra 840AV, Quadra 660AV, and Centris 660AV, use a Digital Signal Processor (DSP) to implement GeoPort functionality. The code that runs on the DSP requires Apple to pay a royalty for every GeoPort that is used on one of these systems.

This DSP code is installed by the disks that originally came with the GeoPort for AV Kit, M1694LL/B. In order to comply with the licensing agreement, Apple Telecom 2.3.3 software checks for the presence of the DSP code and only installs an updated version if an old one exists.

If for any reason, you need to install the Apple Telecom software on a clean system, you must first install the software from the disks that came with the GeoPort, then you can upgrade to Apple Telecom 2.3.3.

If a customer has lost their original GeoPort AV disks, they must contact 1-800-SOS-APPL to replace the missing disks.

NOTE: Apple Telecom 3.0 or greater is not supported on these AV systems.
