MegaPhone: -93 Error Bomb (5/95)

======================================================================

Article Created: 18 May 1995

TOPIC -----------------------------------------------------------

This article describes the MegaPhone -93 error bomb.

DISCUSSION -------------------------------------------------------

We spoke with Cypress and they are aware of this bug planning a fix for around
the end of June 1995. This only occurs when MegaPhone tries to forward a call to
PowerTalk on a network with no Zones (the '*' zone) in the Chooser. You can put
a router on the network.

If you need demonstrate MegaPhone and PowerTalk, try this: Do not use the
Universal Mailbox to get mail on networks with no zones, and pre-load the
mailbox with voice messages prior to running the demo on a zone-less network.
