8•24 GC Software Must Have Correct Name To Load (6/95)

===

Article Created: 13 June 1995

TOPIC ---

I installed the 8•24 GC software for my Macintosh IIfx running System 7.0.1, but at startup, the icon has a red circle and slash through it. How do I get the software to load?

DISCUSSION --

This may be due to the control panel not being named correctly. Make sure the control panel has this exact name, "8•24 GC" (without the quotes).
