System 7.5.1: Sharing Removable Volumes (6/95)

Article Created: 29 June 1995

TOPIC -----

I understood that System 7.5.1 supported sharing removable volumes on the fly. But when I eject one of my CD discs, insert another, and choose "Sharing" under the file menu, I get the following error:

"One or more items could not be shared, because not all volumes are available for file sharing."

DISCUSSION -----

System 7.5.1 does support sharing removable media and automatically shares CD discs when they are inserted. Once inserted, it takes a moment or two to prepare the given volume for file sharing. You do not need to open the Sharing window unless you wish to change the access privileges of that volume.

If you attempt to open the Sharing window before the operating system is ready to share the volume, you get the error indicated above. Click the "OK" button and choose "Sharing" again, by that time, the volume is ready to be shared, and the "Sharing" window opens normally.
