LaserWriter 7.x Driver Not Included With AppleShare 4.1 (7/95)

=====

Article Created: 19 July 1995

TOPIC -----

I just installed System 7.5.1 and AppleShare Print Server 4.1 on my Workgroup Server 8150. I then received an error message something like, "Print server had trouble getting to the LaserWriter file. Please make sure the print drivers are installed correctly," when the server restarted. What is the problem?

DISCUSSION -----

You need the LaserWriter 7.x driver. The LaserWriter 7.x driver is not on the AppleShare 4.1 installer, and not on the System 7.5 Update 1.0 Installer.

You can find the LaserWriter 7.2 driver on the System Software 7.5 Installer by selecting Custom Install, Printing, and LaserWriter. You can also find LaserWriter 7.1.2 driver on the System Software 7.1.2 Installer, System Software 7.1 Installer, or LaserWriter II Installer v5.0 software by clicking the Custom button and scrolling to LaserWriter software.
