Article Created: 18 August 1995

TOPIC -----

Which computers can use the AppleCD 600 CD-ROM drive?

DISCUSSION -----

Apple has tested the AppleCD 600 quad-speed drive with all Macintosh computers currently shipping and many older Macintosh computers. Apple is supporting the AppleCD 600 CD-ROM drives on Macintosh computers with 25 MHz 68030 processors or faster, with the exception of the Macintosh IIfx.* Slower computers may still work with the AppleCD 600, but are not supported based on our current information.

Several Macintosh computers ship with the AppleCD 600i already installed, including:

- Power Macintosh 5400/120
- Power Macintosh 7200 series
- Power Macintosh 7500 series
- Power Macintosh 7600 series

- Macintosh Performa 5300
- Macintosh 5200 series**
- Macintosh Performa 6200 series**
- Macintosh Performa 6300, 6290, 6320

The AppleCD 600i internal upgrade kit (M4070LL/A) is available and can be installed using the same mounting brackets as the AppleCD 300i.
