Apple Presentation System: Won't Work w/DOS Compat Card (9/95)

===

Article Created: 7 September 1995

TOPIC ---

I want to use the Apple Presentation System with my DOS Compatibility Card, but
I cannot get it to work. Is there a way to do this?

DISCUSSION ---

These two systems cannot work together. The DOS Compatibility Card changes the
characteristics of the video signal when displaying a MS-DOS/Windows screen
image. These changes may vary based on the monitor that is attached, and the
settings in the PC Setup control panel.

The Apple Presentation System is not be able to handle the differences in the
video signal. The Apple Presentation System expects a 640x480 67-Hz Macintosh
signal, but it is receiving a 640x480 60-Hz VGA signal when using MS-DOS or
Windows.
