MAE: asdtool Utility Converts Macintosh File Formats (9/95)

==

Article Created: 13 September 1995

TOPIC ---

This article provides information on asdtool a new Macintosh Application
Environment (MAE) utility.

DISCUSSION --

Apple is pleased to announce the availability of a new utility for use with
Macintosh Application Environment, `asdtool'.

asdtool converts AppleSingle file format to AppleDouble and vice-versa. It can
optionally translate carriage returns to linefeeds and handle double-byte
characters, such as Kanji. asdtool determines the file format and, following
conversion, adds a suffix of _sgl or _sbl as appropriate. For complete
information, please read the man page supplied in the tar distribution.

asdtool is covered under the `APPLE SOFTWARE LICENSE AGREEMENT' which is
supplied with MAE.

asdtool and other utilities are available from `support.apple.com' using FTP.
The asdtool can be found in the directory /pub/mae/utilities. For more
information, please see the README contained in the same directory.
