Video Out Default (PAL) Extension: Read Me (12/95)

```
=======================================================================
```

Article Created: 21 December 1995

TOPIC ---

This article contains the Video Out Default (PAL) extension ReadMe file. This extension is preinstalled on Power Macintosh 8500 computers purchased in countries that use the PAL standard.

DISCUSSION --

Video Out Default (PAL)

This extension is intended for use on the Power Macintosh 8500 Series in countries that use the PAL television standard.

You do not interact directly with this extension. It works behind the scenes as part of your system software.

For countries that use the PAL television standard, this extension is preinstalled. However, should you wish to install it into a new System Folder, follow these instructions:

To Install Video Out Default (PAL):

Step 1

Drag the Video Out Default (PAL) icon from the CD to your hard disk's System Folder icon (do not open the System Folder).

Step 2

Click OK in the dialog box that appears.

Step 3

Restart your computer.

Why is this extension needed?

The Power Macintosh 8500 can detect whether or not a television is plugged in, but is not able to determine if the television uses the PAL or NTSC television standard. The system software normally assumes that an NTSC television is connected.

This extension alerts the system software that it should assume a PAL television is connected instead.
