Color OneScanner 600/27: PhotoShop Plug-in Doesn't Work (3/96)

Article Created: 5 March 1996
Article Reviewed/Updated: 12 March 1996

TOPIC -----

When the Apple Color OneScanner Plug-in is moved to the Photoshop Acquire folder it does not work. Now I cannot Scan from the Dispatcher software either. Why?

DISCUSSION -----

The Apple Color OneScanner Plug-in must be left in its original folder. You can either make a copy of the Apple Color OneScanner or make an ALIAS, and put that in the PhotoShop Acquire folder.

IMPORTANT:

You cannot change the name of the original Apple Color OneScanner Plug-in. You must keep the name " Apple Color OneScanner".
