PowerBook PCMCIA Expansion Module Solutions for the PowerBook 500 Series
=====

The manufacturers of the following PC Cards (PCMCIA cards) have confirmed that their cards are compatible with the PCMCIA Expansion Module (rev. A) for the Macintosh PowerBook 500 Series computers.

This list does not include all cards that may be compatible with the Expansion Module for the Macintosh PowerBook 500 Series. The cards listed below have not been certified to work with the PowerBook 500 Series PCMCIA Expansion Module through Apple's Macintosh PowerBook Qualified Program. PC Card models and product availability may vary by country. For detailed information concerning a specific PC Cards, contact the manufacturer.

NOTE: Using an incompatible card may result in damage to the Expansion Module, the card and/or your Macintosh PowerBook computer.
