At Ease and Open Transport: 680x0 Computers Issue (4/96)

=====

Article Created: 10 April 1996

TOPIC -----

I'm using At Ease on a 680x0-based Macintosh computer. After installing System 7.5 Update 2.0 and enabling Open Transport with the Network Software Selector, my computer hangs during startup, while the extensions are loading.

DISCUSSION -----

As of March 1996, At Ease is not compatible with Open Transport. This includes all versions, At Ease 3.0.1 and earlier.

The work around is to use Classic AppleTalk instead of Open Transport. A future update for At Ease will correct this issue.
