Color LaserWriter 12/600 PS: Printer Utility and Win95 (3/97)

===

Article Created: 30 May 1996

TOPIC ---

I want to turn off the startup page on my Color LaserWriter 12/600 PS from my
Windows 95 computer. I am using the bi-directional parallel cable to connect to
the printer.

DISCUSSION --

You cannot use the Apple Printer Utility under Windows 95 except through Netware
configurations. On Windows 95 you can use the Apple Printer Utility with NetWare
only. If you do not have NetWare you can use the Apple Printer Utility on the
parallel port from a Windows 3.1 system.

When you run the Apple Printer Utility, it gives you two options: Parallel and
Network. Parallel is automatically greyed out. This is normal. The Network
option is for using the utility through a Netware connection.
