WorldScript: Component Names & Version History Questions (6/96)

Article Created: 6 June 1996
Article Reviewed/Updated: 7 June 1996

TOPIC -----

What is the difference between "WorldScript Updater", "WorldScript Pieces Install", and "7.5.1 WorldScript Updater"?

Why is the WorldScript Power Adapter extension installed by the System 7.5.3 installer, when the rest of the required software (if you happen to be using WorldScript) is not?

DISCUSSION -----

Different Names For The Same Thing

"WorldScript Updater", "WorldScript Pieces Install", and "7.5.1 WorldScript Updater" are all the same thing. The next WorldScript Update is expected to have only one name.

Worldscript Updater Versions

There are two versions of the "Worldscript Updater" currently available, version 1.0 and version 1.0.1. Version 1.0 is currently posted online. New machines, such as the Power Macintosh 5400/120, include version 1.0.1, which should be used in place of version 1.0.

The changes in 1.0.1 are as follows:

Begin_Table

Version 1.0	Version 1.0.1
-----	-----

InputBackSupport (7.5.1)	InputBackSupport (7.5.3)*
WorldScript I (7.5.1)	WorldScript I (7.5.2)**
WorldScript II (7.5.1)	WorldScript II (7.5.1)***

End_Table

* Version 7.5.3 of InputBackSupport includes changes for the Korean Language Kit (KLK) support.

** Version 7.5.2 of WorldScript I fixes a bug that occurred when used with Adobe Type Manager and fixes a problem in the Hebrew and Arabic Setting control panels.

*** Version 7.5.1 of WorldScript II was not revised for version 1.0.1.

Why The WorldScript Power Adapter Is Always Installed

=====

The WorldScript Power Adapter extension includes patches that improve overall printing performance. These improvements are independent of Language Kit software. This is why it is installed by the System 7.5.3 installer while the rest of the required Language Kit/Worldscript software is not. The name of this extension may be misleading, except that it also includes some WorldScript enhancements.
