Language Kits: How to View Web Sites in Other Languages (6/96)

==

Article Created: 11 June 1996

TOPIC --

I have the Japanese Language Kit installed on my computer and am using the Apple
Internet Connection Kit, which includes Netscape as the web browser application.
I would like to be able to view web sites in Japanese, but the text appears
garbled. How can I setup Netscape to properly view Japanese?

DISCUSSION --

Netscape allows you select different language encoding and font displays. You
can setup different fonts for different encodings and just change the encoding
whenever you look at a different web site.

Follow these steps to change the language encoding to Japanese in Netscape v1.1
and v2.0.

Netscape 1.1
============

Step 1

Choose Preferences from the Options menu.

Step 2

Choose Fonts and Colors from the pop-up menu.

Step 3

Choose Japanese from the For the Encoding pop-up menu.

Step 4

Set Japanese Fonts to Font setting.

```
Step 5
------
Set Default Encoding to SJIS and check Auto Select.

Netscape 2.0
============
Step 1
------
Choose General from the Options menu.

Step 2
------
Choose Fonts panel.

Step 3
------
Choose Japanese from the For the Encoding pop-up menu.

Step 4
------
Set Japanese Fonts to Font Setting.

Step 5
------
Click OK.

Step 6
------
Choose Documents Encoding from the Options menu.

Step 7
------
Choose Japanese Auto-Detect
