Color OneScanner 600/27: Scanning 35mm Slides (6/96)

=====

Article Created: 17 June 1996

TOPIC -----

Is it possible to scan 35mm slides or negatives on the Apple Color OneScanner 600/27?

DISCUSSION -----

Flatbed scanners which allow you to scan in negative or positive film require a transparency adapter. The Color OneScanner 600/27 does not have a transparency adapter, and was not designed to support scanning of any type of film.
