MacDNS: Number of Domains Supported (6/96)

```
=====================================================================
```

Article Created: 24 June 1996

TOPIC ---

I am setting up a WWW server on my Macintosh. I want to use MacDNS for all of my
DNS services, which needs to serve 20 domains. Can MacDNS handle this?

DISCUSSION ---

There is no limit set in MacDNS, however, there is a limitation in the Mac OS
file system of 346 open files. Each zone file counts towards this limit. Each
zone file will also increase the application's RAM requirement by about 2 KB.
