Apple Media Tool: Making a Compatible ISO 9600 Disc (6/96)

===

Article Created: 1 July 1996

TOPIC ---

I am using the Apple Media Tool to create Microsoft Windows ISO-9660 formatted
CD-ROM discs. However, when I use the media tool converters, I get an error
message stating that some of my files have invalid ISO characters. What are the
invalid ISO characters?

DISCUSSION --

In order for your project to run correctly on an ISO 9660 formatted CD-ROM disc,
you need to make sure you do the following:

• File names and extensions should be in all capitals.

• File name should not exceed eight characters, and extensions three
  characters.

• Numbers in file names should be separated from the alpha characters by
  an underscore. For example MOVIE_1.MOV

Characters Not Allowed include:
- Hypens
- Spaces
- Colons
- Slash
- Backslash
