Apple Remote Access Client Updater: ReadMe (7/96)

=====

Article Created: 30 July 1996

TOPIC -----

This article is the Apple Remote Access (ARA) Client Updater Read Me file.

DISCUSSION -----

Name: Apple Remote Access Client Updater  
Version: 2.1  
Released: July 8, 1996  
Description: The updater on this disk allows you to update ARA Personal Server 2.0, 2.0.1, 2.0.1 RevB or 2.0.1 RevC to ARA Personal Server 2.1.

From the Read Me included with this software:

Apple Remote Access Personal Server 2.1 Updater Read Me

-----

The updater on this folder allows you to update ARA Personal Server 2.0, 2.0.1, 2.0.1 RevB or 2.0.1 RevC to ARA Personal Server 2.1. Before you run the updater, make sure that you have one of the previous version of ARA Personal Server installed in your Macintosh. If you have ARA Client installed, please download and run the updater for Apple Remote Access Client.

ARA Personal Server 2.1 supports serial port rates of up to 115,200 bps, provides better compatibility with ARA 1.0, and comes with modem scripts for most popular modems and ISDN terminal adapters. For more information, please refer to the 'Read Me' in 'Remote Access Files' folder.

To run the updater, simply launch the Installer application and follow the instructions.

NOTE: Previous version of ARA Personal Server installs the application program 'Remote Access Personal' in 'Remote Access Personal Folder' at the root of your hard disk. The updater will install ARA Personal Server 2.1's 'Remote Access

Personal' at the same location. If you moved the old 'Remote Access Personal' to other location in your hard disk, please delete it and remember to use the new application after the update.
