Performa 5200: Touch Screens & Display Dimensions (8/96)

=====

Article Created: 26 August 1996

TOPIC -----

I need to adapt touch screens for use with my Macintosh Performa 5200 computers. I contacted a vendor who manufactures touch screens and they need to know the tube dimensions and the degree of curvature of the front/face of the display in order for me to use a touch screen. What are these dimensions?

DISCUSSION -----

The radius of the curvature for the display (CRT - cathode ray tube) used in the Macintosh 5200CD family* of computers is 3.94 feet. The dimensions are as follows:

Screen Height: 213.0 mm
Screen Width: 284.0 mm
Screen Diagonal: 351.0 mm

*The following computers are in the Macintosh 5200CD family: Macintosh 5200/75 LC, Performa 5200, Performa 5210, Performa 5215, and Performa 5220.
