Apple Network Server: Shutting Down uShare (3/97)

=====

Article Created: 4 December 1996
Article Reviewed/Updated: 12 March 1997

TOPIC -----

I am attempting to unmount volumes on an Apple Network Server but get an error saying the volumes are in use. I suspect this is because uShare still has active processes. I shutdown uShare using the following command:

```
/ushare/bin/ustop
```

DISCUSSION -----

Though the command above generally works well for shutting down uShare, it may leave a number of processes active. The following command will force uShare to kill all open processes with a timeout value set to zero:

```
/ushare/bin/usstop to=0 all
```
