LC Ethernet Card: Wasn't tested in all Power Mac Computers 12/96

===

Article Created: 12 December 1996

TOPIC ---

I recently upgraded from a Macintosh LC III to a Power Macintosh 6200 series
computer. Can I use my PDS Ethernet card in my new computer?

DISCUSSION --

Apple has not tested the Apple Ethernet LC Card (M0443LL/B) in every Power
Macintosh computer with an LC-style Processor Direct Slot (PDS). The LC PDS
Ethernet cards fit, and you should not have any problems using them, but they
were not tested in every Power Macintosh computer.
