Mac OS 7.6 Spelling Error (1/97)

=====

Article Created: 17 January 1997

TOPIC -----

This article describes a spelling error found in the Extensions Manager control panel.

After I installed System 7.6, opened the Extensions Manager control panel, and viewed by package; I found a "System Software 7.6" package and a "System Software 7.6" package. The "t" was missing from one of the package names.

DISCUSSION -----

This is a known issue, and it was found too late for changes to be made. It will be fixed in the next system software update. The package name comes from one of the 'vers' resources. This spelling error affects these five files:

Apple Ethernet CF  
Apple Ethernet LC  
Apple Ethernet NB  
Apple Built-in Ethernet  
Apple TokenRing NB
