Mac OS 7.6: AppleShare Workstation Version Issue (1/97)

=====

Article Created: 17 January 1997

TOPIC -----

I installed AppleShare Workstation software version 3.6.4 on my system, however when I select a file server from the Chooser, the version that shows up in the login dialog box says v 3.6.3. What version of AppleShare Workstation software do I have installed?

DISCUSSION -----

You have version 3.6.4 installed, the file server login dialog box contains a typographical error. If you choose Get Info in the File menu on the file AppleShare in your Extensions folder, you will see the correct software version number.
