DISCUSSION --

About CD Extras

This document includes brief descriptions of the software in the CD Extras
folder. This Apple and third-party software extends the usefulness and power of
Mac OS 7.6. Check the folders for each software product for more information
about the software.

IMPORTANT: If you have questions about any third-party application programs in
the CD Extras Folder, contact the software vendor directly. The telephone number
or address for each vendor is located with the software program.

At Ease Updaters

Use these programs to update At Ease versions 2.0 or 2.01 to version 2.03, and
to update At Ease for Workgroups version 3.0 to version 3.01.

QuickDraw 3D Extras

This folder includes sample 3D textures and models. It also includes a
pre-release version of Cumulus 2.5, an image database system. You can use
Cumulus to view all the images and textures included with the QuickDraw 3D
Extras. The folder also includes the Gerbils game, to experiment with 3D images
as you maneuver images of gerbils on a roller coaster.

HyperCard Player

You use the HyperCard Player to open HyperCard stacks. HyperCard stacks are
arrangements of text, pictures, and other elements on sequential screens, or

cards. Some HyperCard stacks hold information; other stacks work like
applications, requesting information from users and making calculations with
that information.

MoviePlayer Extras

The MoviePlayer application, installed in your Apple Extras folder, plays
QuickTime movies. The MoviePlayer Extras folder includes two "plug-in
files"—Authoring Extras and Goodies, that add some extra features to the
MoviePlayer application. MoviePlayer Extras also includes some sample QuickTime
movies.

Other Extras

• Eric's Solitaire Sampler, a solitaire game by Delta Tao Software
• Pointer Mode control panel, to ensure the pointer appears in screen
  captures
• additional desktop patterns
