## TITLE

Apple Studio Display 17: Noise or Shimmer at Startup is Normal

Article ID: 58216  
Created: 1/4/99  
Modified: 8/10/99

## TOPIC

I notice that when I start up my computer, my Apple Studio Display 17 makes a noise and the image shimmers a bit then settles down. Is there a problem with the display?

## DISCUSSION

No, the display is behaving normally and does not require service. What is happening is called Degaussing. Degaussing is the process of stabilizing the magnetic field of the CRT. It is a normal function of every display and does not indicate a need for service.

Waking the display from sleep or initiating a degauss from the on-screen display can also cause the same noise to be generated.

**Note:** The Viewable Image Size of the Apple Studio Display 17 is 16.0 inches.
