TITLE

iMac (Slot Loading): Sound Out Volume Lower with 3D
Sound Selected

Article ID: 58468
Created: 10/4/99
Modified: 1/13/00

TOPIC

Is it normal for the speaker volume to be lower when 3D Sound is selected in the Sound control panel?

DISCUSSION

Yes, due to the method in which 3D sound is created, the sound level will be slightly lower than if 3D sound was not selected. Selecting 3D sound simulates a wider sound-field that results in a slightly lower volume level.
