Apple Restoration CD - Read Me File System Software March 1997

This file contains a listing of all the software configurations available on the CD. In addition, this file contains important information about the release of the Apple Restoration CD that supersedes information in the *Apple Restoration CD User's Guide*.. Refer to the on-line descriptions and those provided here when selecting a software configuration to restore on Macintosh computers.

Restoration CD Configuration Information

Using the Apple Software Restore application on the Apple Restoration CD, you can choose the software you want to reinstall on a Macintosh computer. The System Software Apple Restoration CDs provides the following software configurations:

Apple Product Installers Version 1,0,1	Disk 6, March 1997

- * Apple recommends that you install the System Update 3.0 from the CD after you install this configuration.
- † Apple recommends that you install Express Modem Software after installing this configuration if the computer has an Express modem installed.
- ‡ Apple recommends that you install Apple CD-ROM Software after installing this configuration if the computer has a CD-ROM drive.
- § Apple recommends that you install the AppleShare 4.0.1 Tune-Up from the CD after you install this configuration.
- ∥ Apple recommends that you use the LaserWriter 8 driver for the LaserWriter, LaserWriter Plus, LaserWriter II, II NT, II NTX, IIf, IIg, Personal LaserWriter NT, Personal LaserWriter NTR, LaserWriter Pro, Pro 630, Pro 810, and LaserWriter Select 360.
- # Apple recommends that you install the System 7.5 Update 1.0 from the CD after you install this configuration.
- ** The CD will not boot this computer. Insert the CD into the player, and boot off the Disk Tools disk for this computer. You can then use the applications from the CD.

Important Information

- 1. You can use the Apple Restoration CD on the Apple CD SC Plus and newer Apple CD-ROM drives. If you are not booting from the Apple Restoration CD, you also need the appropriate CD-ROM software driver installed on your Macintosh computer.
- 2. You cannot boot from the Apple Restoration CD on Macintosh SE, SE/30, Classic, II, IIx, or IIcx computers. With these computers, start your Macintosh with a bootable hard drive and then run the Restoration CD installer program from the Other Items window that appears in the Finder.
- 3. If you're restoring software to a blank replacement hard drive in a single-drive system, the computer should boot from the Apple Restoration CD after a few seconds. If the computer has an internal hard drive capable of booting the computer, press and hold down the Shift, Option, Command, and Delete keys while starting the system. If the computer has multiple SCSI hard drives that are set up as bootable startup disks, disconnect or leave them powered off while using the Apple Restoration CD. Here are a few other notes about booting from the Apple Restoration CD:
- a. On Macintosh SE, SE/30, II, IIx, IIcx, IIci, IIfx, IIsi, and Performa 200, 400, 405, and 430 computers, pressing and holding down the Shift, Option, Command, and Delete keys during startup disables the hard drive installed as SCSI device 0.
- b. On all other computers except those listed in items 2 and 3a, pressing and holding down the Shift, Option, Command, and Delete keys during startup disables the hard drive chosen with the Startup Disk control panel. If no disk was chosen with the Startup Disk control panel, the computer will either disable the hard drive installed as SCSI device 0 or the key sequence will have no effect (depending on the model of computer).
- c. In general, if you are using an Apple CD 300 player and you set the CD-ROM drive's SCSI device number to a higher number than a bootable hard drive, the computer should boot from the CD-ROM drive. If other devices

are starting the computer, either disconnect them, set the CD-ROM drive to be the startup disk, or specify a hard drive to be the startup disk and then use the Shift-Option-Command-Delete key sequence to disable the drive. If the computer still attempts to boot from SCSI device 0, even after using the Shift-Option-Command-Delete key sequence, you can reset the startup disk to SCSI device 0 by clearing parameter RAM (pressing and holding down Option-Command-P-R keys while starting up your system). Note, however, that clearing parameter RAM also clears other user settings.
